

02PN20

RADIATION AND METAL DETECTION SYSTEM

RADIATION DETECTOR

- Detection of radioactive materials
- Embedded, high-sensitivity, full-height radiation sensors
- ANSI and IEC standards compliant
- Options include:
 - Isotope identification with NaI detectors
 - Fixed, indoor use or portal outdoor use [IP65 compliant] configurations
 - CEIA NetID Anywhere network system for instant remote access or monitoring

METAL DETECTOR

- Simultaneous detection of all-metal weapons, including magnetic, non-magnetic and mixed alloy and light alloys threats
- High-Throughput
- Detection of radiation shielding containers (Lead) containing radiological sources

DUAL THREAT DETECTION IN A SINGLE GATE

The **02PN20**, as an option, can be equipped or field upgraded after the installation **with a high sensitivity array of radiation detection sensors**.

This array covers the full height of the transit, allowing accurate detection of radioactive substances carried by people in transit. Available in **Panel** and **Elliptic column versions**.

THREAT DETECTION THROUGH ELECTROMAGNETICS

ENHANCED WALK-THROUGH METAL AND RADIATION DETECTOR

The 02PN20 is a Walk-Through Weapons and Radiation Detector that combines two advanced detection technologies in a single lightweight Portal.

TWO ADVANCED DETECTION TECHNOLOGIES

Metal weapons such as miniaturized assembled and disassembled firearms, in magnetic and/or non-magnetic metal, are detected independent of their orientation and position of transit, thanks to an extremely uniform inspection field.

At the same time, innocuous items, such as keys, coins, shoe shanks and belt buckles, are effectively discriminated thus reducing the nuisance alarm rate five or more times compared with other available metal detection systems.

The 02PN20 is also equipped with an array of sensitive gamma sensors, covering the full height of transit, allowing accurate detection of radioactive substances carried by the people in transit. The detection capability includes a wide range of energies for a complete coverage of the possible radioisotopes.

The gamma detectors adapt themselves to the background radiation level, adjusting the threshold to the optimum value for the installation environment. At the same time, a special algorithm prevents the adaptation to unusual background levels and changes.

The arrays of gamma sensors covers the full height of the transit, allowing accurate and sensitive detection of radioactive substances carried by people in transit.

COMPLIANCE

The radiation detection technology utilized in the 02PN20 has been tested in Government-Authorized Laboratories.

PREVENTION OF RADIOACTIVE SUBSTANCE SHIELDING

Any attempt to smuggle radioactive substances using masking containers is effectively prevented by a specific detection function. Two advanced detection technologies are therefore combined in order to enhance each single capability.

HIGH LEVEL OF RELIABILITY

The overall system is characterized by sturdy, reliable electronic and mechanical construction, ease of installation, automatic reset calibration and very high immunity to external electrical and mechanical interference.

The 02PN20 refined, elegant design can be used in the most demanding architectural environments. The unique patented design of the gate is compact and easy to install while utilizing minimal amounts of space. The lightweight design of the gate is perfectly suited for portable applications.

Checkpoint Security coverage using the 02PN20 can be completed by a G-SCAN Radiation Detector positioned at the exit of the carry-on baggage inspection X-Ray machine.

ALARM SIGNALING

The **02PN20** is an integrated Metal and Gamma Detector Portal, designed to detect metal and radioactive threats simultaneously.

Metal weapons, radiation sources and shielding containers are indicated on the bar display with appropriate optical signals.

Threat transit zones are indicated by means of 20 independent optical indicators.

All detection data and programming operations are available through the Network monitoring software [see current NetID literature].

TWO DIFFERENT ALARM SIGNALING MODES can be set, according to the preferred operating procedures:

- **METAL WEAPONS:** acoustic alarm, position indication by red color zone and bar-graph intensity on the control unit.
- **RADIOACTIVE SOURCES:** dedicated acoustic alarm, position indication by blue color zone and bar-graph intensity on the control unit.

Detection of metal threats and radioactive sources carried by the same transiting person are displayed simultaneously.

- **METAL WEAPONS:** acoustic alarm, position indication by red color zone and bar-graph intensity on the control unit.
- **RADIOACTIVE SOURCES:** intensity and position remotely alarmed through network monitoring software to a supervisor station.

In remote-operation mode, local display of alarms caused by radioactive substances can be deactivated.

SINGLE METAL THREAT DETECTION AND INDICATION

MULTIPLE METAL THREATS DETECTION AND DISCRIMINATION

SIMULTANEOUS DETECTION OF A METAL THREAT AND A RADIOACTIVE SUBSTANCE (LOCAL MODE)

SHIELDING CONTAINER DETECTION

Extended communication capabilities including data networking for alarm and status supervision through wireless TCP/IP.

The **02PN20** can be fitted with the **APSiM3 Plus** Wireless Network Module.

EXTENDED COMMUNICATION CAPABILITIES

The **APSiM3 Plus** integrates a secure web server and WiFi infrastructure using state of the art SSL and WPA2 security protocols. The **APSiM3 Plus** can act both as a WiFi client and WiFi access point allowing to set up a local secure wireless network without requiring additional devices. The wireless network covers a 328 ft wide area on open site conditions.

Any authorized device capable of wireless connectivity and https browsing (such as tablet pc, smart phones and laptops) can access the following functionalities:

- Automatic monitoring of the auto-diagnostics, battery level and security level of the installed **02PN20** group.
- Visual representation of the transits flow through the **02PN20**. The transits data is stored in the **APSiM3 Plus** for up one year and can be downloaded through date selection.

APSiM3 Plus INTEGRATED WEB-SERVER & LOGGER [OPTION]

- Monitor the status of Metal Detector network in real time
- Remotely control and verify the security level
- Report on number of people screened and alarm rates automatically
- No server or specialized client software required, only a web browser
- Zero configuration network for simple setup
- 2 x Ethernet 100base-TX • Wi-Fi - 802.11 b/g

Visual representation of the transits flow through the **02PN20**.

The **NetID Network Management System** has been supervising CEIA IP enabled Metal Detectors since the year 2001. Today 150 instances of NetID Systems are in active use worldwide managing more 250 different sites.

INTEGRATED CAMERA SYSTEM WITH MDAR SOFTWARE*

- Centralized Monitoring of the functionality of each Metal Detector
- Centralized Setting of the Metal Detectors working parameters
- Transits flow monitoring
- Detailed reporting of the transits data and the security device configuration data
- Data collection from each Metal Detector detailing the information on every single transit

* This option requires the installation of the APSiM3 Plus integrated web-server & logger

Detection Spectrum of a radioactive substance.

SPECIFICATIONS

QUALITY	Continuous self diagnostic system	
	Proven reliability	
	No periodic re-calibration and preventive maintenance required	
	No scheduled maintenance	
	Fully digital design	
WALK-THROUGH GATE STRUCTURE	State-of-the-art, robust and washable panels or compact elliptical columns	
	Protected against aging, weather and wear	
CENTRAL CONTROL UNIT	Ergonomic and robust design	
	High visibility alphanumeric display and programming keyboard	
	Made of advanced plastics or stainless steel and anti-vandalism construction (option)	
	Access to the front panel protected by hardware key and 3 levels of passwords	
ALARM SIGNALING	VISUAL SIGNALS	Multi-zone display bar for "height on person" localization
		4 light bars with selectable entry/exit and pacing indication
		Green and red metering signals proportional to the mass of the detected target
	AUDIO SIGNALS	10 selectable continuous and pulsed tone plus 34 special tones
		10 selectable sound intensities ranging from 0 to 90 dB A at 1m
TYPE OF SIGNALING	VISUAL	Fixed or proportional to the mass in transit - visible from 6m under lighting of 4000lux
	VISUAL ZONE INDICATION	60 distinct zones (20 vertical x 3 lateral) entry and exit side
PROGRAMMING	Up to 50 built-in Security Programs	
	Remote via Infrared Remote Control Unit, Bluetooth™ or Ethernet 10/100 base T (option) interface	
	SECURITY LEVEL	International Standard (IS) command
		Chip card
	Local by Control Unit alphanumeric display and keyboard	
OPERATIONAL FEATURES	Programming and chip card access protected by user and super-user passwords	
	High discrimination and transit flow rates five or more times greater than other metal detection systems	
	Quick reset time as short as 0.2 seconds for high throughput rate	
	Very high detection speed (up to 50 ft/sec.)	
	Built-in operational functional verification	
INSTALLATION DATA	Automatic synchronisation between two or more metal detectors with distance of down to 2" without the use of external cables	
	Automatic Installation function (OTS)	
ENVIRONMENTAL DATA	Power Supply : 100...277V~ ±10%, 47...63Hz, 40 VA typical consumption	
	Operating temperature: -4°F to 149°F (-34°F to 158°F upon request)	
	Storage temperature: -34°F to 158°F	
	Relative humidity: 0 to 95% (without condensation)	
COMPREHENSIVE SUPPORT	CEIA USA provides full operational and technical training support by certified personnel either at CEIA USA facility or at customer premises	

CERTIFICATION AND COMPLIANCE

- Compliant with the applicable Standards for Enhanced Metal Detectors
- Compliant with and certified to the applicable detection requirements for Gamma Portal Monitors
- Compliant with all Airport Security Standards worldwide
- Compliant with the applicable electromagnetic Standards on Human Exposure and Pacemaker Safety
- Approved by Ministries and Competent Governmental Authorities
- Compliant with applicable International Standards for electrical safety and EMC
- Harmless to magnetic media (CD, tapes, etc.)
